# Developing a Backend Admin - Learner's Academy

Developed by Harsh Sharma

Email: sharmaharsh241221@gmail.com

Flow Chart:

Application Flow:

- At first, welcome page will open with Admin Login Interface
- The Admin will provide the Login Id (harshsharma2011@gmail.com) & Password (harsh@0611), as stored under Adminportal.java class
- After login, all section details will be displayed viz Class Detail, Student Detail, Subject Detail & Teacher Detail
- As per the requirement, the option can be choose & detail can be entered.
- **Examples**
    1. If subjects is selected, then Add Subject Detail & List of Subject will be shown
    2. If teacher is selected, then list of teachers with their assigned class from the database will be displayed, with multiple option delete, edit and create a teacher's data.
    3. If the students are selected a list of students with their plan schedule will be displayed.
    4. If the option logout is select the admin will be logged out from the application

Conclusion:

- The Application is security protected, i.e. Admin Login & Password is required for making any changes.
- The application is capable to fetch & store the data required for the Learners Academy into DataBase.
